AMOS™ 8.1 (Feb. 2007) Update CD Now Available *Includes AMPC™ 7.1 Software Release*

Dear Alpha Micro Dealer:

The latest AMOS 8.1 Update CD has just been released and sent to our current Technical Support subscribers. This Update CD is now available to all dealers and includes the following major software:

- Very latest AMOS 8.1 software release for AM-8000™ and Eagle 800™ systems
- Latest UltraVNC™ version for improved remote system administration. Now includes file transfer capability!
- AMPC 7.1, the new software release for Cardinal™, SuperFalcon™ and Eagle 750™ users. The AMPC 7.1 release uses the latest RawEther™ and SCSI++™ libraries for improved functionality with new networking hardware, SCSI, and IDE devices.
- Expanded DVD software, including the new DVDRES quick restore software as well as additional DVD drive models now supported.
- d/Soft™ support software so that you can utilize the d/Soft 5.0 releases on AM-8000 and Eagle 800 systems.

AMOS 8.1 Software Release (February '07)

The latest AMOS 8.1 software release contains the following updates to the January '06 release:

- New OSINST AMOS PIC code program.
- AlphaTCP 1.5A updates
- Expanded DVD software to support additional drive models
- Accumulated patches and bug fixes to over thirty software components
- Updated documentation

Details of the changes and additions to the AMOS 8.1 software can be found in the Release Notes, DSS-10618-84, contained on the update CD. This document can also be found at www.alphamicro.com in the documentation area.

AMPC 7.1 Software Release

The totally new AMPC 7.1 software for the Eagle 750 systems and Windows XP Professional or Home-based PCs is contained on this Update CD. Windows Vista is not supported at this time. This AMPC version, derived from the latest AMOS 8.x release, works with the new Cardinal USB dongle and SuperFalcon board. As explained in Marketing Bulletin AMB2007-01, AMPC 7.1 offers a number of advantages:

- Supports the new Cardinal USB security device, in addition to the SuperFalcon board.
- No magic code required for installation on any Windows XP[®] based PC.
- Same high performance as AMPC 7.0, and approximately twice the speed of AMPC 6.0
- Incorporates most of the fixes and improvements added to AMOS 8.x over the past year.

Complete installation instruction and software information is contained in the documentation included with the AMPC 7.1 software.

Keep Up With The Latest Improvements

Software development at Alpha Micro proceeds at a good pace. Every month, many of our products are being enhanced. It behooves all of our dealers to have the latest versions of our new, rapidly evolving products, to ensure that your end-users have access to all of the fixes and enhancements being done.

Dealers with annual Technical Support contracts have already been sent one copy of this CD. Those dealers wishing to subscribe to our Technical Support should refer to Marketing Bulletin AMB2007-04 or contact Alpha Micro Order Administration at (800) 289-2574.

For those dealers wishing to purchase a copy of the CD, see the reseller supplement attached to this Marketing Bulletin. To order one or more copies, contact Alpha Micro Order Administration at (800) 289-2574.
